

IceTrek Kelvin Mitt - Neck Lanyard

1. Clip both ends of the lanyard into the pull loops of your mittens
2. Place the lanyard over your neck, place your hands in your mitts and let your hands dangle by your side
3. Adjust the length of the lanyard using the toggle.

Neck lanyard is too short - your outstretched arms will be restricted

Neck lanyard is too long - too much slack in the lanyard.

Ideal length - when your mitts are dangling you should be able to warm your fingers in the gauntlet of the mitten.

4. Use the pull loops to don your mitts. This will take some getting used to but significantly reduces the chance of frost injury to your fingers
