FOR USE WITH ICETREK HARNESES

1. Hook serrated Navimount bar ends into gear loops on harness waist belt (a). Or tie included connector loops (b) to a convenient point on your waist belt. Placing a twist in the loop before inserting the bars provides a superior attachment.
2. Remove neck support extension (c) and attach end Velcro tabs (d) to Velcro strips on Ictrek harness shoulder straps, adjusting up or down as required. Alternatively, use the neck support extension.
3. Insert your compass into slots (e) on Navimount and secure by activating locking lever (f). A minimum of two corners of your compass base plate should make contact with Navimount slots.
4. Use the adjustment toggle (g) underneath your compass to lock Navimount into a desired position / angle.

FOR USE WITH OTHER HARNESES

1. Tie included connector loops (b) to convenient points on either side of your harness waist belt.
2. Hook serrated Navimount bar ends into the connector loops (b). Placing a twist in the loop before inserting the bars provides a superior attachment.
3. Attach the included neck extension (c) to form a loop and place it over your head.
4. Insert your compass into slots (e) on Navimount and secure by activating locking lever(f). A minimum of two corners of your compass base plate should make contact with Navimount slots.
5. Use the adjustment toggle (g) underneath your compass to lock Navimount into a desired position / angle.
